

# TorqSecure

**Defense-grade security solution for protecting sensitive data and preventing breaches**

TorqSecure is an agent-less software bills of materials (SBOM) intelligence platform that transforms SBOMs into a live, full-stack radar of component risk. It ingests SBOMs straight from Github or via upload and blends eight vulnerability feeds with exploit-prediction scores, and presents actionable dashboards ready for ATO evidence.

## Mission Alignment

### Mission Need

Programs need continuous, machine-readable proof that every line of code is secure.

### The Challenge

Manual scans and static spreadsheets leave blind spots when zero-days strike.

### Our Solution

TorqSecure delivers always-on SBOM analysis, instant vulnerability triage, and ATO-ready evidence across any enclave.

## Key Benefits

Slash SBOM triage time by 87%

Surface exploitable CVEs in less than 90 seconds

Track code-to-firmware inventory continuously

Auto-generate VDR & VEX for eMASS

Deploy in cloud, SCIF, or edge

## About Agile Defense

Agile Defense stands at the forefront of innovation, driving advanced capabilities and solutions tailored to the most critical national security and civilian missions. Whether developing specialized solutions, contextualizing data, or strengthening cybersecurity, our expertise is instrumental in safeguarding our nation's sensitive assets.

## Feature Breakdown

### Continuous SBOM Ingestion & Inventory

Webhooks pull CycloneDX or SPDX files from CI/CD, container registries, and vendor repos, mapping libraries, containers, OS images, firmware, and hardware into a single asset graph. Analysts gain real-time, full-stack traceability instead of periodic snapshots.

### Intelligent Risk Scoring & Prioritization

TorqSecure fuses NVD, OSS Index, GitHub Advisories, VulnDB, and EPSS likelihood to rank threats by exploitability and mission criticality. Heat-map dashboards highlight the few components that matter, accelerating zero-day response from hours to minutes.

### Policy Compliance & Evidence Automation

Built-in DoD templates flag license conflicts, outdated versions, and non-conforming containers before release. One click exports VDR and CISA-aligned VEX documents for Quick-Track or cATO packages, providing continuous accreditation artifacts with zero manual formatting. The same hardened container runs in GovCloud or fully air-gapped networks.
